

MINEX[®] 12

Functional Filler

Engineered for high clarity, loading and durability

We offer a broad range of engineered fillers and extenders designed to help you achieve superior performance across a wide spectrum of coatings applications, including industrial and marine coatings, powder coatings, wood and decorative paints.

Combining high quality minerals with ultrafine processing and engineering expertise, MINEX 12 delivers unique properties not found with standard options – from superior clarity, durability, color development to UV+EB cure compatibility and VOC reduction.

HIGH CLARITY
WITH
LOW HAZE

- Easily tinted and enhanced color development as a colorant dispersion aid
- Engineered fine particle size for higher gloss
- Improved scratch and abrasion resistance in surface coatings
- Regulatory-compliant (silica deficient)
- Increase loading potential in solvent clears to lower VOCs

- Transparent filler (refractive index similar to most common binders) for high clarity and low haze finishes.
 - Accelerated cure rate of UV curable clear systems
 - Higher loading in clears based on superior optics
 - UV/EB cure compatible and optimization and reduction of photoinitiator usage level
